

Subject 1767

March 27, 2017

TO: Subscribers to UL's Certification Services under the Standard for Early-Suppression Fast-Response Sprinklers, ANSI/UL 1767

SUBJECT: Industry File Review – Effective Date Extension Announcement

As announced in UL's Action Required Letter of December 17, 2015, UL has issued a new edition of Standard UL 1767 with the effective date of May 1, 2017.

Based on comments received from the industry for early-suppression fast-response (ESFR) sprinklers, UL has been advised that demonstrating compliance with the revised salt spray corrosion requirements has been more difficult than originally anticipated. To provide additional time for these subscribers to demonstrate compliance with the revised test requirements and to avoid the potential for reduced availability of these important fire protection products having the UL mark, the effective date is being extended until November 1, 2018.

It is anticipated that all testing and resulting revisions will be completed no later than September 28, 2018, provided that all Industry File Review projects are opened and all requested samples are received at UL no later than August 3, 2018.

Sincerely,

A handwritten signature in black ink that reads "Monica Westphal".
