

Subject 111

May 14, 2015

TO: Subscribers to UL's Certification Services under the Outline of Investigation for Multioutlet Assemblies, UL OOI 111

SUBJECT: Cancellation of Industry File Review for UL Outline of Investigation, 111

UL's letter of September 15, 2010, announced an Industry File Review (IFR) for the changes in certification requirements from UL 5 and 5A to the requirements in UL Outline of Investigation 111 for Multioutlet Assemblies (PVG) and Multioutlet Assembly Fittings (PVUR) with an effective date of July 30, 2015.

Due to Industry representatives requested that UL develop a consensus Standard for Multioutlet Assemblies, UL issued a certification bulletin dated April 23, 2012 to suspend the IFR based on the Industry request. A Standard Technical Panel (STP) was formed and a meeting was held last year (2014) with the result to pursue a Bi-National Standard for Multioutlet Assemblies for Canada and the United States.

As UL Standards is working on the Bi-National draft and Bi-National version of the proposed standard is different than the Outline of Investigation, 111, there is no purpose to conduct a file review for certified products under Multioutlet Assemblies (PVG) and Multioutlet Assembly Fittings (PVUR) to the Outline of Investigation 111. Therefore, the Industry File Review by the Action Required/Announcement Letter dated September 15, 2010 with Effective Date of July 30, 2015 for UL Outline of Investigation 111 is being cancelled.

Should you have questions regarding the above, please contact the undersigned.

Very truly yours,
