

# UL's Lightning Protection Certificate Services

## Architects, Designers, Specifiers and Insurance Industry

*The addition of a lightning protection system to any structural design worldwide provides protection from physical damage and reduces the likelihood of fire. Having a lightning protection system independently verified helps ensure its compliance and reliability. Recognizing the importance of this two stage process, UL is dedicated to working collaboratively with architects, designers and the insurance industry to minimize damage and subsequent claims related to lightning strikes.*

UL is the only OSHA accredited Nationally Recognized Testing Laboratory (NRTL) offering Master Label® Certificate third party inspections for lightning protection systems. UL has been involved in lightning protection for more than 100 years, and has issued Master Label® Certificates on buildings including the White House, Sears/Willis Tower in Chicago, the U.S. Treasury building, the new Qatar Doha International Airport main terminal and Air Traffic control tower, and U.S. embassies worldwide.

UL's highly trained inspection professionals include active members in the standards writing process for lightning protection on both a national and global scale. Their objective role is without industry agendas and has been the catalyst for UL's ability to build technical expertise and a solid history in lightning protection inspections. In the last 10 years, UL has issued over 50,000 certifications. As the industry leader, UL is the best choice for your certification inspections.

### Inspection Standards

- UL96A
- IEC 62305
- NFPA 780
- AS/NZS 1768
- Government/Military Specs
- Other nationally recognized standards

### Inspection Documents

- **Master Label® Certificate** — Indicates a fully compliant system
- **Letter of Findings** — Offered for limited scope or partial structure

### Additional Services

- **UL Knowledge Services** — A wide range of training seminars including:
  - Lightning Protection Standards Seminar
  - Advisory Services — Consultation services for design processes

A Master Label® certificate is issued for structures that fully comply with a recognized standard. UL retains ownership of the Master Label® certificate. This certificate is valid for the time period identified on the certificate based on UL's reasonable estimate that a system will remain unchanged during that time period.
